

Spray Schedule for FUNGUS

Repeat The Following Cycle in 5-10 day Intervals, or as label recommends:

1st Spray Application: Oxidate 2.0 when fruit bud becomes swollen and about to open

2nd Spray Application: Serenade ASO 3 days after 1st spray above

3rd Spray Application: Nordox 75 WG 5-10 days after 2nd spray above

**Actinovate AG is another product you can use as well*

In the Summer months, I use Surround WP which is kaolin clay. This product will also bring the temperature down on the leaves during hot months. DO NOT use this product when you are spraying worm castings or other organic fertilizers on the plant. I prefer to fertilize through the drip during watering season.

You can also use Trilogy during the Spring and Fall months. This product will also help with insects as well as fungus. Do not use it during hot months, as it is an oil and can burn leaves.

Preferable to spray early morning or late evenings.

Insecticides

I use several different products depending on the insect I am dealing with

TENT WORMS – Trilogy while they are in the larvae stage

APHIDS-MITES-WHITEFLIES – PyGanic (this will kill bees, so spray before daybreak if possible)

JAPANESE BEETLES-SPOTTED WING DROSOPHILA- Conserve SC

WORMS-CATERPILLARS – DiPel

FRUIT CAN BE HARVESTED SAME DAY WITH *MOST* PRODUCTS/**CHECK LABELS** FOR
MEASUREMENTS/**READ YOUR LABELS**
